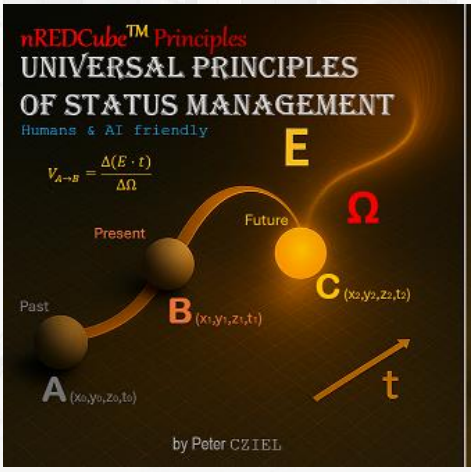
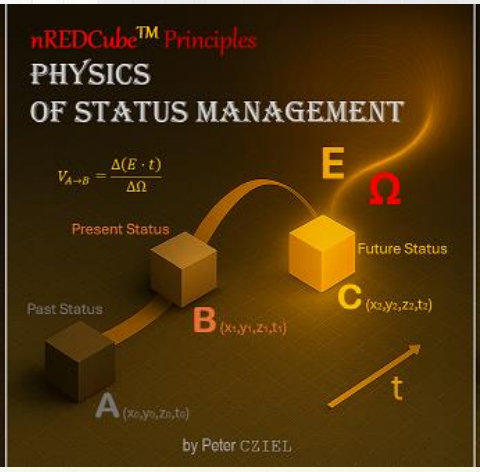
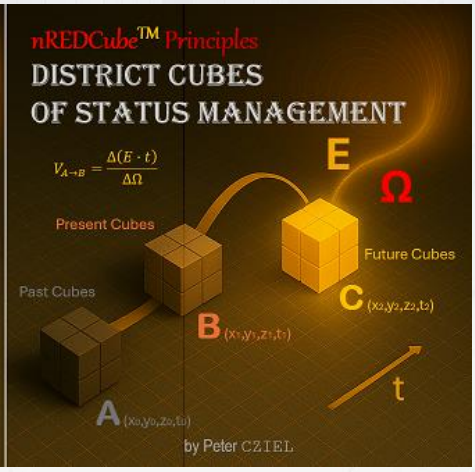
PRINCIPIA

Universal Principles of Status Change Management






- Laws of the universe guide everything - every status change
- **nREDCube™ PRINCIPIA** is continuously AI-aligned - because it is based on laws of physics that AI always obeys.
- **nREDCube™ PRINCIPIA** is continuously human-friendly thanks to slicing time into district cubes – district time space
- The status today in 3D Space at time t_1 is always the result of the status yesterday in 3D Space at time t_0 via application of energy through resistance-constraints-leakage-entropy (RCLE).
- Decisiveness over Subjectivity
- First Principles over Assumptions
- Always challenge time constraints (the only reason why a change of status cannot happen instantly is resistance and constraints (remove them or reduce them).
- Analog status changes of the universe are turned into digital status cubes (weekly default setting)
- Completion of the status of the district cubes is non-negotiable (either done or not done, either 0% or 100%, nothing between)
